

Prince Kumar

Data Analyst | Pharma & Commercial Analytics

Delhi NCR | 9097211030 | princerv0011@gmail.com | [linkedin.com/in/princekr2310](https://www.linkedin.com/in/princekr2310) | github.com/prince2310-97

PROFESSIONAL SUMMARY

Data Analyst with nearly 3 years of pharmaceutical commercial experience in Key Account Management (Wockhardt Pharmaceuticals, Jun 2022 – Mar 2025), now applying that business knowledge to structured data analysis. Completed an 8-month Data Analytics certification program and 3 end-to-end analytics projects covering pharma sales effectiveness, retail account profitability, and healthcare appointment no-shows, using Python, SQL (MySQL), Power BI/DAX, and Excel. Domain strengths include sales performance, distributor and account analysis, and territory planning.

TECHNICAL SKILLS

Programming & Databases: Python (Pandas, NumPy), SQL (MySQL, CTEs, window functions)

BI & Visualization: Power BI (DAX, Data Modeling, Power Query), Advanced Excel, Matplotlib, Seaborn, Tableau

Analytical Methods: Exploratory Data Analysis, Statistical Analysis (Chi-Square), Data Cleaning, Feature Engineering, KPI Analysis, Trend Analysis, Root Cause Analysis

Business Domain: Pharma Sales Analysis, Commercial Analytics, Healthcare Analytics, Profitability Analysis, Key Account Management, Demand Planning

PROFESSIONAL EXPERIENCE

Wockhardt Pharmaceuticals Ltd. | Jharkhand, India

Jun 2022 – Mar 2025

Senior Key Account Manager

Managed a portfolio of 140+ distributor and healthcare accounts across Jharkhand, consistently achieving 115–121% of quarterly sales targets.

- Sales Data Monitoring:** Maintained customer-wise pharmaceutical sales data in Advanced Excel to track primary/secondary sales, return rates, and stock movement and identify demand anomalies.
- Commercial Sales Analysis:** Analyzed distributor sales trends and primary-to-secondary conversion gaps to support order and demand planning, monitor stockout risks, and identify potential inventory pressure.
- Reporting & Planning:** Prepared SKU-level performance reports for management to identify growth opportunities, and evaluated monthly/quarterly territory trends to prioritize distributor and hospital visits.

DATA ANALYTICS PROJECTS

Pharma Sales Effectiveness & Territory Optimization | [Githublink](#)

Python, SQL (MySQL), Power BI, DAX | Synthetic FY 2024–25 data

- Analyzed ₹84.12M of synthetic sales data (720 records, 4 territories, 20 field reps, 3 products, ~645K primary units) to evaluate territory and rep effectiveness. Wrote MySQL queries with window functions, engineered Secondary Conversion Ratio and Marketing ROI metrics, and built a 4-page Power BI dashboard with DAX.
- Identified East as the lowest-conversion territory (0.87 vs 0.95 portfolio average) and the only territory below the 0.80 threshold in Q1 (0.79), and one rep with the lowest target achievement (69%, conversion 0.88) among 20. Flagged a Wokderm Plus Q4 primary–secondary mismatch as a localized channel inventory pressure indicator, not a confirmed cause.
- Calculated overall Marketing ROI of 5.11 (Revenue / Marketing Spend; North 5.95, East 3.97); North and South generated ₹47.6M (~56.6% of revenue). Recommended an East distributor inventory review and shifting marketing spend toward higher-ROI territories.

Retail Key Account Profitability Diagnostic | [Githublink](#)

Python, SQL (MySQL), Power BI, DAX, Excel | Public SuperStore US data, H1 2015

- Analyzed \$1.92M sales (\$224K profit, 11.64% margin; 1,952 transactions, 1,365 orders, 1,130 customers) across 4 regions and 3 categories. Found 48.98% of transactions loss-making (\$291.45K total loss).
- Tested discounting as a driver: only 2 of 1,952 transactions exceeded a 10% discount (discount–profit correlation ≈ -0.06), while loss-making transactions averaged \$590 in sales vs \$1,366 for profitable ones, pointing to small-order cost-to-serve as the stronger signal. Identified South (-4.04% margin) vs Central (17.26%) and Office Machines as the most loss-making sub-category (-\$67.9K).
- Segmented 1,130 customers into KAM tiers (141 Strategic Core, 539 Loss-Making); 156 of 591 profitable customers generated 80% of profit. Built a 6-page Power BI dashboard and recommended a minimum order value review, a South profitability review, and dedicated coverage for Strategic Core accounts.

Medical Appointment No-Show Analysis | [Githublink](#)

Python (Pandas, NumPy, SciPy, Matplotlib, Seaborn) | Public Brazil healthcare dataset, 2016

- Cleaned and analyzed 110,527 raw appointment records (110,519 after cleaning; 20.19% overall no-show rate), engineering features for age group, wait-time bins, chronic-condition flags, and day of week. Validated patterns with chi-square tests; 18–34 was the highest-risk age group (23.98%).
- Found the raw SMS comparison misleading because same-day appointments (34.9%) never receive an SMS. After stratifying by wait time, SMS reminders were associated with lower no-show rates: 0.6 pp (0–7 days), 5.6 pp (8–14 days), 7.2 pp (15+ days). This is an association, not proof of causation.
- Recommended piloting reminders for longer-wait appointments and targeted outreach to 18–34-year-olds.

CERTIFICATION

Data Analytics Course | Physics Wallah (PW Skills in collaboration with NSDC & PwC) | Apr – Dec 2025 (completed 8 Dec 2025) | [Certificate Link](#)

Coverage: Python, MySQL, Power BI, Tableau, Advanced Excel, EDA, Data Visualization, AWS

EDUCATION

Bachelor of Pharmacy (B.Pharm) | Bengal School of Technology, Hooghly, West Bengal | CGPA: 8.23 / 10

2018 – 2022
